Special OPS "CODE BLACK"

Wireless with Invisible flash

KEY FEATURES

- 8MP resolution
- 5.6"x4.75"x3"
- 60 Invisible Infrared LED's
- Wirelessly transfers 640x480 resolution images to email or cell phone
- Time Lapse mode
- Adjustable sensitivity
- Still photos or videos
- Date, time, temp, and moon phase imprint
- Threaded tripod insert
- Up to 8GB SD card capacity
- Pipe through security

WIRELESS

Getting pictures is as simple as purchasing a prepaid messaging or data plan from your local cellular provider*. Once setup, the camera automatically sends pictures to your cell phone or email via MMS or GPRS. No website to log on to; pictures are sent directly to your cell phone or email instantly. The "Special OPS" is perfect for scouting, security, and surveillance anywhere a cellular signal is available**.

*Works with any cellular service that uses the GSM network

**Users must ensure that they have good cell service in the area they plan to use the camera.

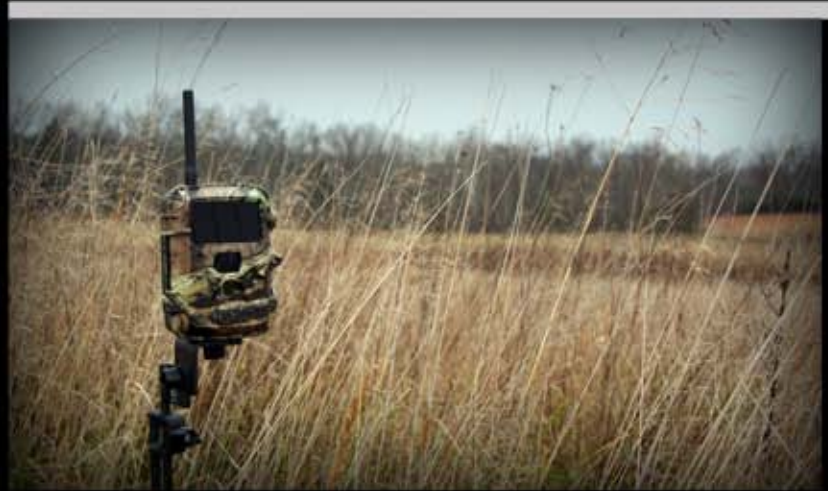

INVISIBLE

Many manufacturers claim to produce invisible or black flash cameras. Truthfully, they are either visible from 10-20 feet or they produce subpar nighttime pictures that are poorly illuminated. Covert has closed the gap by creating a camera that is 100% invisible to animals and invisible to humans beyond approximately 4 feet, yet it produces well illuminated pictures out to 50 feet!

AFFORDABLE

The Covert "Code Black" is a fraction of the size and cost of our competitors. Unlike our competition, there is no recurring "Plan" to buy from Covert, just purchase a "pay as you go" sim card and renew it as needed. Most users will spend about \$30-50 annually to operate the camera instead of \$50-\$100 per month like our competitors.

INCLUDED IN THE PACKAGE

standard antenna
attachment strap

BLACK60 RED40

Extreme Series

KEY FEATURES

- 8MP resolution
- 2" color viewer
- Operates on 12AA's
- 5.6"x4.75"x3"
- Time Lapse mode
- Adjustable sensitivity
- still photos or videos
- Date, time, temp, and moon phase imprint
- Threaded tripod insert
- Up to 8GB SD card capacity

EXTREME

Introduced in 2011 and totally revamped in 2012, the Extreme series is just that - EXTREME! For 2012 we redesigned the housing to accommodate 12 batteries, improved the PIR sensor for up to 70' detection and increased resolution to 8MP. Both models have built in controls and a 2" lcd screen for reviewing photos in the field.

INVISIBLE

Many manufacturers claim to produce invisible or black flash cameras. Truthfully, they are either visible from 10-20 feet or they produce subpar nighttime pictures that are poorly illuminated. Covert has closed the gap by creating a camera that is 100% invisible to animals and invisible to humans beyond approximately 4 feet, yet it produces well illuminated pictures out to 50 feet!

BLACK vs. RED

There are 2 basic differences between the BLACK60 and RED40. The BLACK60 has 60 black flash LED's and the RED40 has 40 red glow LED's. Both produce high quality well illuminated night time photos. Much debate has been made over visible vs. invisible. The fact of the matter is deer do see red IR, the debate is whether it has an effect on the deer. Now our customers can decide for themselves and purchase accordingly, without sacrificing picture quality!

MP6 LOST & MP6

Lost Camo® only available to authorized Mathews® dealers

KEY FEATURES

- 6MP resolution
- 5.1"x4"x2.9"
- 28 Infrared LED's
- Time Lapse mode
- Adjustable sensitivity
- Still photos or videos
- Date, time, temp, and moon phase imprint
- Threaded tripod insert
- Up to 8GB SD card capacity
- Pipe through security

OBJECTIVE

We had one thing in mind when designing the MP6: build a capable camera for a low cost. We accomplished this by including several key components and features from our top shelf cameras while taking away some of the amenities to cut cost. Notice we didn't take away quality, only the "frills" that run manufacturing cost up.

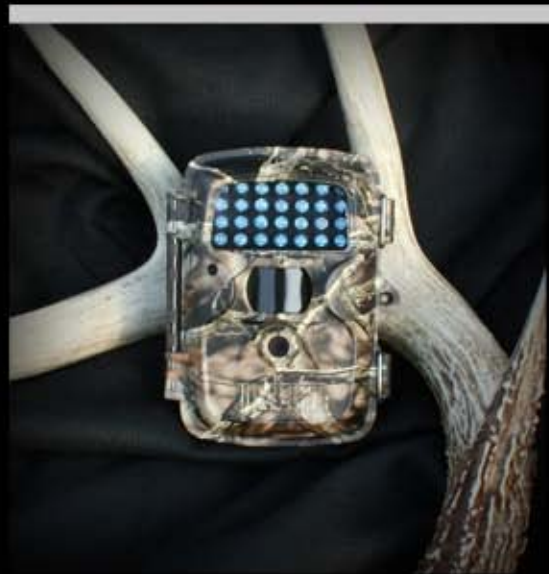

VALUE

Today's trail camera consumer is bombarded with "fancy" features and options that normally don't add up to function and value. It's become common place for companies to make claims but never back them up. The MP6 makes 1 claim- More bang for the buck! With the function and features included, it's easy to back up that claim.

LOST

No one can argue with the success of Mathews® and their brands. The decision to dress the MP6 in Lost Camo® and make it exclusive to Mathews® dealers was a simple one. Simply stated, Lost Camo®'s business plan was created to change lives. Neither Matt McPherson nor Mathews® acquire any proceeds from Lost Camo®. Every cent of the yearend profits is given away — mostly to missionaries. Covert Scouting Cameras is happy to help support this cause.

REVEAL 8MP

White flash makes
a strong comeback

KEY FEATURES

- 8MP resolution
- 5.5"x3.5"x2.2" in size
- Powerful white flash w/ 60' range
- Operates on 8AA batteries
- Adjustable sensitivity
- Wired programer w/ color viewer
- Still photos or videos (daytime only)
- Threaded tripod insert
- Up to 8GB SD card capacity

OBJECTIVE

After introducing our first white flash cameras in 2011 with huge success, we still weren't quite satisfied. We didn't just want a white flash camera, we wanted the BEST white flash camera. In 2012 we have increased the resolution to 8mp, installed a more powerful Xenon flash, and reworked the image processing software which all combined produces a professional print quality full color photo 24 hours per day.

CA4.0 4MP Top Seller

KEY FEATURES

- 4MP resolution
- 5.7"x3.3"x1.5" in size
- 24 Infrared LED's
- Operates on 4AA batteries
- Adjustable sensitivity
- Wired programer w/ color viewer
- Still photos or videos
- Up to 8GB SD card capacity

POPULARITY

In 2011, the CA3.0 became the #1 selling camera in our history. We saw the opportunity to make the lil cam even better in 2012 by increasing the resolution to 4mp. With the following the CA3.0 had it's freshman year, this year the CA4.0 is sure to be a fan favorite.

ACCESSORIES & APPAREL

ACCESSORIZE WITH COVERT

Security

Anti-theft

No one wants their cameras ripped off by some low life thief. Protect your investment with Python Cables from Master Lock and Security Boxes from Covert. Python cables are available in 5/16" or 3/16" in diameter. 5/16" cables are available in black or camo, as singles or master packs keyed alike. See order form for details. The security boxes are constructed of 14ga steel and have a baked on powder coat finish. There is a model for all Covert Cameras. See order form for details.

Camera Mounts

Stic-N-Pic

No tree? No problem! The Stic-N-Pic trail camera stand gives you the freedom to decide exactly where you want to put your camera. Made of steel with a durable powder coated finish that will withstand years of abuse. the Stic-N-Pic offers an adjustable camera height of 26" - 46", rotates 360 degrees, tilts up and down and allows the user to mount multiple cameras in one location (must purchase additional add-a-cam brackets). The 3 prong stand easily presses into the soil and offers a stable platform even in the highest wind. Fits any camera with a standard threaded tripod insert.

ElimaTree

Elimatree does exactly as the name applies. Built of light weight aluminum, the ElimaTree is the most portable camera stand on the market. With 180 degrees of adjustment, your camera can be mounted anywhere you can imagine. When fully inserted in the ground, the camera height is an ideal 33". Fits any camera with a standard threaded tripod insert.

Tree60

With the Covert Tree60, mounting options are endless. Use the included velcro attachment strap, the cameras attachment strap or included wood screws. Mount to other surfaces such as concrete or drywall using standard anchors available at hardware stores. Ideal in security applications where cameras need to be mounted high and angled down. Fits any camera with a standard threaded tripod insert.

Accessories cont.

ANTENNA

If your Code Black wireless camera is failing to send images, the first place to look is signal strength. Often that can be remedied with our signal boosting antenna. When mounted above the camera with the supplied grounding plane, the antenna will normally increase cell signal 1-2 "bars" in poor signal areas. Even in areas with good reception the antenna will often increase success transferring images.

MORE POWER

All of our cameras get exceptional battery life, but occasionally the situation calls for more power. All Covert Cameras use 6volt power supplies. We offer a power cable that will convert your 12volt power supply to 6 volts and plug directly into our cameras. We also offer a standard 6 volt power cable that works with any 6volt power supply. Our "Battery Extend" battery box works great for more than doubling the battery life of the CA4.0, CA3.0, or Edge series by allowing users to add 8AA batteries.

Battery Extend

APPAREL AND HATS

The new "Scrape" T uses an actual Covert trail cam picture for the art work. Available in most sizes, short sleeve or long sleeve. Gray with black artwork.

"Size Does Matter" in many ways, whether its the size of your trail cam or the size of the bucks on your trail cam. Tell the world with the new "Size Does Matter" Covert caps. Available in grey/white, black/pink, Mossy oak Infinity, Bottomland, Treestand or Realtree APG.
